Zertifikat

Die Dichtung vom Typ **SIGRAFLEX MF v20011Z2MF mit Edelstahlbördel**

der **SGL TECHNOLOGIES GmbH**
Werk Meitingen FO
Werner-von-Siemens-Str. 18
D-86405 Meitingen

wurde von uns nach den Vorgaben der VDI-Richtlinie 2440 (Ausgabe November 2000) geprüft. Bei 10 MPa Ausgangspressung und nach 48-stündiger Auslagerung bei 300°C an Luft und anschließender Leckagemessung bei Raumtemperatur und 1 bar Druckdifferenz mittels Helium-Massenspektrometrie erfüllt sie mit

$1.5 \cdot 10^{-7}$ mbar l / (s·m)

das Leckageratenkriterium

10^{-4} mbar l / (s·m)

und gilt damit hinsichtlich des oben genannten Leckagekriteriums als

hochwertig im Sinne der TA Luft.

Dieses Zertifikat gilt nur in Verbindung mit unserem
Prüfungsbericht 950 666 001 Dr.Koc/Hh/Gd vom 22. Januar 2003
und den dort niedergelegten Prüf- und Randbedingungen.

Bescheinigung

SGL Carbon GmbH
Werner-von-Siemens-Str. 18
86405 Meitingen

Hiermit wird bescheinigt, dass die u. g. Dichtungen der oben genannten Firma in Anlehnung an die Ausblassicherheit (VDI 2200) überprüft und anerkannt wurden. Einzelheiten sind dem entsprechenden Untersuchungsbericht, A.-Nr. 450696 zu entnehmen.

Das Produkt erfüllt die Anforderungen:

- Ausgangsflächenpressung ($Q_A = 30 \text{ MPa}$)
- Ausblassicherheit Klasse C
- TRwS Ausblassicherheit nach TÜV-Prüfanweisung $> 2,5^* p_{\max}$

Grundlage des Zertifikats ist die Prüfanweisung zur Ausblassicherheit hinsichtlich des Eignungsnachweises von Flanschdichtungen des Instituts für Kunststoffe.

Voraussetzung hierfür ist die Verwendung von Flanschsystemen aus Stahl, welche die Mindestflächenpressung im Einbau erreichen oder überschreiten sowie unterhalb der maximal zulässigen Temperatur und des maximal zulässigen Innendrucks betrieben werden.

Produktbeschreibung:

- Sigraflex® Universal
- Sigraflex® Universal Pro
- Sigraflex® Hochdruck
- Sigraflex® Hochdruck Pro
- Sigraflex® Select
- Sigraflex® MF
- Sigraflex® HEXAGON
- Sigraflex® APX2 Hochdruck

Ausblassicherheit:

Klasse A, mit 100 bar Innendruck, bei Restflächenpressung nach Auslagerung

Klasse B, mit 100 bar Innendruck, bei einer Mindestflächenpressung Q_{smin} , von ca. 13 N/mm^2

Klasse C, mit 100 bar Innendruck, Q_{smin} um weitere 25 % reduziert, d. h. ca. 10 N/mm^2

Diese Bescheinigung ist gültig bis September 2017.

München, den 17.09.2014

FIRE TYPE-TESTING TEST CERTIFICATE

REGISTRATION / CERTIFICATE N°.: 03.001.39B

TÜV Nederland B.V.

hereby grants

: **SGL TECHNOLOGIES GmbH**
Werner von Siemens Strasse 18
D-86405 Meitingen

the right to publish this certificate verbatim and unabridged,
considering the successful testing by Franz Schuck GmbH at Steinheim, Germany, in compliance
with the **British Standard 6755; Part 2; 1987; "fire type - testing requirements"**
including amendments up till N°. 6712; 1991.

The flange-leak rates applied are the external-leak rates of the forementioned standard.

TESTGASKETS

Gasket Type

: **SIGRAFLEX MF with inner eyelet**
Grade V20011Z2MF with perforated stainless steel insert

Nominal Diameter

: **DN 15, DN 32, DN 80, DN 200 und DN 400**

Pressure rating

: **ANSI CLASS 150**

Gasket material

: Graphite with 1.4401 perforated stainless steel sheet
reinforcement and PTFE / 1.4401 stainless steel lining

Inner Eyelet

: 1.4571, 0.15mm

Purity

: According DIN 51903

Testflange Material

: 1.4571

Testflange Bolts / Nuts

: A4 70 / A4 80

Date of Testing

: 05-02-2003 and 06-02-2003

Report N°.

: B03.001.02.00.00

QUALIFICATION RANGE

This certificate represents the validity for gaskets qualified as:

Gasket Type

: **SIGRAFLEX MF with inner eyelet,**
Grade V20011Z2MF with perforated stainless steel insert
and PTFE / stainless steel lining

Qualification sizes

: **DN 15 and larger**
(NPS ½" and larger)

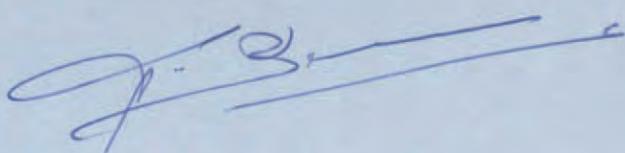

Qualified Pressure Ratings

: **ANSI Class 150 and ANSI Class 300**
(PN 16, PN 25 and PN 40)

Federal Institute for Material Research and Testing.", by
German Social Accident Insurance Institution for the raw
materials and chemical industry,
Edition: March 2013;
Rule BGR 500 "Betreiben von Arbeitsmitteln" part 2,
chapter 2.32 "Betreiben von Sauerstoffanlagen",
paragraph 3.17 "Lubricants and sealing materials",
Edition: April 2008.

All pressures of this report are excess pressures.
This test report consists of page 1 to 5 and annex 1 to 3.

This test report may only be published in full and without any additions. A revocable permission in writing has to be obtained from BAM for any amended reproduction of this certificate or the publication of any excerpts. The test results refer exclusively to the tested materials.

In case a German version of the test report is available, exclusively the German version is binding.

1 Documents and Test Samples

The following documents and samples were submitted to BAM:

- 1 Test Application
- 1 Material Data Sheet
(2 pages, revision no. 02 2009/0)
- 1 Safety Data Sheet
(5 pages, revision no. 1.00, revised March 11, 2011)
- 15 Disks SIGRAFLEX MF (V...11Z2MF), Batch 12050023
 - Outer-Ø: 140 mm
 - Color: Grey
- 3 Metal plates,
coated with SIGRAFLEX MF (V...11Z2MF), Batch 12050023
 - Size: 145 mm x 145 mm; Thickness: 2 mm
 - Color: Grey

2 Test Methods

To test and evaluate the compatibility of the sealing material SIGRAFLEX MF (V...11Z2MF), Batch 12050023, for use as a gasket material in flanged connections in piping, valves and fittings or other components for gaseous oxygen service up to 130 bar and temperatures up to 250 °C, a flange test, the determination of the autogenous ignition temperature and an investigation of the aging resistance were carried out.

3 Test Results

3.1 Autogenous Ignition Temperature (AIT)

The test method is described in annex 1.

Results:

Test No.	Initial Oxygen Pressure p_i [bar]	Final Oxygen Pressure p_f [bar]	AIT [°C]
1	50	132	> 500
2	50	133	> 500
3	50	132	> 500
4	50	131	> 500
5	50	134	> 500

Up to temperatures of 500 °C, no ignition of the sealing material SIGRAFLEX MF (V...11Z2MF), Batch 12050023, could be detected in five tests with initial oxygen pressures of $p_i = 50$ bar. The final oxygen pressure p_f was approximately 133 bar.

3.2 Artificial Aging

The test method is described in annex 2.

Results:

Time [h]	Temperature [°C]	Oxygen Pressure [bar]	Mass Change [%]
100	275	130	- 0,6

After aging of the sealing material SIGRAFLEX MF (V...11Z2MF), Batch 12050023, at 130 bar oxygen pressure and 275 °C, the test sample was apparently unchanged. The sample lost 0.6 % in mass.

3.2.1 AIT after Artificial Aging

The test method is described in annex 1.

Results:

Test No.	Initial Oxygen Pressure p_i [bar]	Final Oxygen Pressure p_f [bar]	AIT [°C]
1	50	132	> 500
2	50	134	> 500
3	50	131	> 500
4	50	131	> 500
5	50	134	> 500

Up to temperatures of 500 °C, no ignition of the sealing material SIGRAFLEX MF (V...11Z2MF), Batch 12050023, could be detected in five tests with initial oxygen pressures of $p_i = 50$ bar. The final oxygen pressure p_f was approximately 132 bar.

This shows, that, as the non-aged sample, also the aged sample did not ignite at temperatures up to 500 °C.

3.3 Flange Test

The test method is described in annex 3.

Results:

Test No.	Oxygen Pressure [bar]	Temperature [°C]	Comments
1	130	250	Only those parts of the gasket burn that project into the pipe.
2	130	250	Same behavior as in test no. 1
3	130	250	Same behavior as in test no. 1
4	130	250	Same behavior as in test no. 1
5	130	250	Same behavior as in test no. 1

In five tests at 130 bar oxygen pressure and 250 °C, only those parts of the gasket burn that project into the pipe; the fire is neither transmitted to the steel nor does the gasket burn between the flanges. The flange remains gas-tight.

4 Summary and Evaluation

Up to temperatures of 500 °C, no ignition of the sealing material SIGRAFLEX MF (V...11Z2MF), Batch 12050023, could be detected with a final oxygen pressure p_F of approximately 133 bar.

At a temperature of 275 °C and an oxygen pressure of 130 bar, the sealing material SIGRAFLEX MF (V...11Z2MF), Batch 12050023, proved to be sufficient aging resistant. The sample lost 0.6 % in mass. Up to temperatures of 500 °C, no ignition of the aged sealing material SIGRAFLEX MF (V...11Z2MF), Batch 12050023, could be detected with a final oxygen pressure p_F of approximately 132 bar. This shows, that, as the non-aged sample, also the aged sample did not ignite at temperatures up to 500 °C.

For safety reasons a safety margin of 100 °C between AIT and maximum operating temperature is being considered in evaluating nonmetallic materials for oxygen service. As the maximum operating temperature is 250 °C, the sealing material SIGRAFLEX MF (V...11Z2MF), Batch 12050023, fulfills this criterion.

On basis of those test results and the results of the flange testing, there are no objections with regard to technical safety to use the sealing material SIGRAFLEX MF (V...11Z2MF), Batch 12050023, as a gasket material in flanged connections in piping, valves and fittings or other components for gaseous oxygen service at following conditions:

Maximum Temperature	Maximum Oxygen Pressure
250 °C	130 bar

This applies to flat faced flanges, male/female flanges, and flanges with tongue and groove.

This evaluation does not cover the use of the sealing material SIGRAFLEX MF (V...11Z2MF), Batch 12050023, for liquid oxygen service. For this case, a particular test for reactivity with liquid oxygen needs to be carried out.

5 Comments

The test results refer exclusively to the tested Batch 12050023 of the sealing material SIGRAFLEX MF (V...11Z2MF).

Products on the market that contain a reference to BAM testing shall be marked accordingly. It shall be evident that only a sample of a batch has been tested and evaluated for oxygen compatibility. The reference shall not produce a presumption of conformity that monitoring of the production on a regular basis is being performed by BAM.

It shall be clear that the product may only be used for gaseous oxygen service. The maximum safe oxygen pressure of the product and its maximum use temperature as well as other restrictions in use shall be given.

Test report

Food regulatory assessment of SIGRAFLEX MF-seals according the FDA requirements

The results of the test report are property of the client. However use of the results by a third party, publication, or duplication in an excerpted version is subject to a written agreement with the Fraunhofer-Institute for Process Engineering and Packaging.

Customer: SGL Carbon GmbH
86400 Meitingen

Date of order: 25.5.2011

IVV Order no.: PA/4367/11

Sample receipt: 9.5.2011 (sample for inspection)

Sample storage: Remaining test material will be stored for six month in the institute.

Total pages
of the report: 3

The results relate only to the investigated samples.

1 Scope

SIGRAFLEX MF seals are used as flat seals in pipes for food processing machines. The seal consist of a high-grade steel reinforces graphite core which at the top and bottom is connected with a high-grade steel film, without the use of adhesive. This in turn is coated with TFM 1700, a modified PTFE. The flat ring seal has a high-grade steel flange on the inside (food contact side). High-grade steel flanges are also sometimes used on the outside. The PTFE-coated high-grade steel film represents the sealing surface. Food contact is largely with the inner steel flange, possibly also with the edges of the PTFE-coated high-grade steel film.

It must be verified that SIGRAFLEX MF seals meet the food legislation requirements according FDA.

The testing is carried out on the basis of the manufacturer's certificates for the individual materials used.

2 Evaluation of the individual layers

According to the manufacturer's information, the high-grade steels which were used (austenitic CrNi-steels) for the high-grade steel films and flanges are suitable for use in contact with foods. In USA there are no statutory regulations for the composition of high-grade steel.

According to the manufacturer's information, the PTFE-copolymer meets the US-American requirements on accordance with 21 CFR 177.1550 "perfluorocarbon resins". The limit value for the total extract (< 3.1 mg / dm² resp. 0.2 mg / in²) as well as the fluorine content (< 0.46 mg / dm² resp. 0.03 mg / in²) are complied with the based on tests at independent testing institutes.

3 Summary

According to the provided certificates of compliance, SIGRAFLEX MF seals is, if used in the proper way, in accordance with the food legislation requirements of USA in contact with all types of food.
